

DRY ICE EXTRACTION

AN ORGANIC, SAFE WAY TO SEPARATE THE CANNABIS OIL FROM THE PLANT MATTER WHILE PRESERVING THE TERPENES.

Dry Ice Extraction/ Separation is an industry secret that is not widely used in the industry for profit reasons.

Materials Needed:

- 1 or 5 gallon 190 Micron hash bag
- 2 pounds of dry ice
- Ounce of cannabis flower
- Large, flat, dark surface
- Pair of gloves for dry ice
- 1 business card

Advantages to dry ice extraction:

- Safe
- Organic
- Full spectrum
- Preserves terpenes
- Very easy

Directions:

- With gloves, place 4 golf ball size or just larger size pieces of dry ice into 190 micron bag.
- Add the ounce of cannabis to the 190 micron bag and shake gently over a large, flat dark surface.
- Continue to shake until the keif becomes noticeably green in color. 2-3 minutes after the start. Time can vary.
- Once finished shaking, collect the keif with a business card into a pile.
- Each gram of keif is approximately 200 -250 mgs of potency. Yield should be 20 - 25% of flower weight.
- Store in a glass jar in temperature stable, low light location.

This is your base material for all proper cannabis medicine making and cooking with cannabis.
